**Our experience** over decades, with many thousands of equipment users, have resulted in what we present here. We know what the user needs, so the two new kits are reduced to the most important parts.

**All parts** that should be changed during one year operation, are assembled in a **wear and tear parts kit**. These kits will be consumed regularly with normal preventive maintenance.

**The Recommended on board repair parts kit** should be on board at any given time for unforeseen events, to make everyday life easier in terms of incineration. If the wear and tear parts are also changed regularly, most reasons for longer downtime can be avoided. Of course, this kit does not cover all situations, but it does address the most essential. Consumed parts should be replaced with new, to always have the recommended level of preparedness.
